Group

OUR SAFETY & SECURITY SOLUTIONS

Our safety and security window films are used extensively by the US & foreign governments to protect people from the hazards of flying glass caused by terrorist bomb blasts. Corporations also rely on our films to protect their employees and their assets from forced-entry.

Whether it is severe weather or an explosion, our safety and security window film helps prevent lethal shards of glass from flying toward people. It provides life-saving protection no matter the condition or situation.

WINDSTORM MITIGATION

When windows give way, glass shards and debris can cause severe damage to both people and property. This clear, strong film bonds to windows with a special adhesive, creating a tough barrier that helps keep glass together under the worst conditions nature can dish out. Our safety films are rigorously tested and meet more standards than any other safety film available.

- » Shutters
- » Panels
- » Screens

FORCED-ENTRY RESISTANCE

While no safety film is bullet proof, it does offer a significant level of protection by delaying entry, even after bullet holes are created. Any additional time school staff has to implement emergency safety procedures decreases the likelihood of serious injuries. Whether it's for a UL-rated entry, ballistic vestibule protection, ballistic glazing panels, or fragment retention films, we offer a variety of solutions for forced-entry resistance and delayed-entry measures. Safety film, anchored to the frame creates a barrier that is extremely difficult to penetrate and makes unwanted entry nearly impossible.

- » Adds Valuable Response Time
- » Reduces Risk From Projectiles
- » Lowers Risk of Property Damage
- » Trusted By Governments & Commercial Clients Worldwide

- » Factory Mutual Approved
 - » Achieves Multiple GSA Performance Levels
 - » Independently Tested to Meet Today's Highest Standards : DOJ, UL, Miami-Dade, etc.

OUR SOLAR SOLUTION

Welcome to Green Economy, an eco-friendly system in which manufacturers, lawmakers and customers are coming together to ensure a cleaner, greener future. We have been leading the green movement since 1981. Together, you and Enpro can play a vital role in shaping tomorrow's world.

Of the many promising renewable technologies, solar window films, in particular, are arguably the most mature. Installing solar control films is a cost-effective, time tested and scientifically proven way to reduce reliance on fossil fuels for interior heating and cooling. We can, quite literally, reduce our carbon footprint by applying a layer of film to our windows.

New construction, renovation or simple improvements have needs that can be met with film.

- » Energy Savings
- » Comfortable Environment
- » Over 99% UV Rejection
- » Up to 92% Glare Reduction
- » Up to 83% Heat Rejection
- » Enpro is a LEED AP-CI Company

OUR VIEW CONTROL SOLUTION

- » Adds Privacy
- » Enhances Aesthetics
- » Controls Visibility
- » Rejects Ultraviolet Radiation
- » Cuts Glare
- » Protects Your Glass

CONSIDERABLE SAVINGS

Buildings account for a staggering 40% of energy consumption in the US. If all residential windows in the US were placed with Energy Star qualifying models, Americans would save \$7 billion in energy costs over the next 15 years – an average savings of up to 15 percent; savings for commercial buildings are expected to be considerably higher.

The cost to replace all those windows is daunting. That's why window films provide a compelling option. Solar control films can help facility managers realize energy savings that rival new windows, but at a fraction of the cost and without the disruption commonly associated with re-glazing.

COMFORTABLE SETTING

By rejecting up to 83% of solar heat in summer months while retaining more interior heat during winter, our films help property owners lessen energy consumption and trim associated heating and cooling costs... regardless of the time of year.

Our films also contain ultraviolet absorbers that block 99% of furnishing-fading UV rays. Our solar control products have been proven to eliminate hot and cold spots, creating a more comfortable learning environment.

IMPROVING Glass Security

WHO WE ARE

The Enpro Group is an organization of dedicated professionals who believe in getting the job done right the first time. Diverse work histories and experience allow us to offer multiple, cost-effective solutions to meet the needs of the customer. We outshine the competition when projects include unique circumstances where multiple solutions are needed to satisfy complex requirements. We believe in the traditional definition of superior customer service and practice it every day.

KNOWLEDGE

We understand that when a client has a concern, immediate solutions are a necessity. Specializing in the safety and security environment, our 200+ years of combined experience allows us to react swiftly with immediate solutions when a client has a need. Our vast array of products and solutions gives us the ability to identify the right, cost-effective solutions. While one single product might provide a solution, a combination of products could offer the best overall consultative based solutions, not product quota driven sales.

PROJECT MANAGEMENT

From start to finish, Enpro's proven project management program provides detailed site surveys along with every proposal. Our unique program effectively communicates all pertinent project information which allows our clients to make the best decisions. Our commitment to detailed communication ensures total satisfaction on the most challenging of projects.
